INSTRUCTIONS FOR FOREIGN

ECONOMIC OPERATORS

MINISTRY OF FINANCE - CUSTOMS

ADMINISTRATION

Version 0.5 eng

2014

Overview of revisions of the document

Number of revision	Date of revision	Short description of corrections
0.2	16.11.2012.	Correction in messages IE345 and IE346 (Actual entered instead of Subsequent). The correct title of the data is: IE345.(ACTUAL OFFICE OF SUBSEQUENT ENTRY) CUSTOMS OFFICE IE346.(ACTUAL OFFICE OF SUBSEQUENT ENTRY) CUSTOMS OFFICE
		Correction in messages IE347 and IE344: R031 is not used in messages IE347 and IE344 because these messages must always contain Entry key and MNR at the same time.
		Correction in messages IE348 and IE345: Data IE348 / IE345.Header.Arrival reference number cannot be obligatory because of cases in which these messages are sent in order to reject an incorrect notice of arrival, which is not stored in the system (e.g. fails to comply with a requirement or regulation).
		National regulations NP014 and NP015 suspended
0.3	10.04.2013.	National rules regarding ENS submission suspended for foreign traders
		National rules and conditions for diversion added
		Regulations related to the structure of LRN for foreign traders updated
		Functionalities and IE messages regarding entry formalities at office of first or subsequent entry (as described in sections 4.4, 4.5, 4.6) suspended for foreign traders
0.4	07.04.2014.	Functionalities and IE messages regarding entry formalities at office of first or subsequent entry (as described in sections 4.4, 4.5, 4.6) implemented for foreign traders with LCP certificate
		Change in condition C583 (see Chapter 6, paragraph 6.2), resulting with changes in messages IE315, IE313
		New condition C584 implemented as replacement for C583 (see Chapter 6, paragraph 6.2), resulting with changes in the messages IE315, IE313
		R805 suspended

		Replacement of rule R835 with rule R840 (see Chapter 6, paragraph 6.2)
		Revision of national rules; NP025 amended
0.5	01.10.2014.	Change of wording (text) of rule R840 (see Chapter 6, paragraph 6.2)
		Change in condition C501 (see Chapter 6, paragraph 6.2), resulting with changes in forming of the messages IE315, IE313, IE328, IE347, IE348, IE349, IE344, IE345, IE346

1. INTRODUCTION

Import formalities, including the safety and security risk analysis, must be carried out for all goods entering the EU customs territory. For this purpose, an Entry Summary Declaration for the Purposes of Safety and Security, including data indispensable for risk analysis and the regular implementation of customs control, is lodged with the entry customs office, primarily for safety purposes.

The processing of the Entry Summary Declaration for the Purposes of Safety and Security (ENS) is carried out with the use of computer technology, and the trans-European customs system in charge of such computer processing is called the Import Control System or ICS. The development and implementation of a completely functional ICS is one of the essential conditions of accession to the EU which the European Commission has set before the Republic of Croatia. .

The advantages of ICS are multiple, considering that business entities will communicate with the ICS system by electronic means, and in this manner exchange data and receive information about the course of the lodging procedure of the ENS in due time. Of the other hand, the Customs Administration will exchange data on all the lodged ENSes with other European customs administrations via electronic messages, thus enabling the continuous and uninterrupted movement of consignments from the point of first entry into EU customs territory to the point of a potential subsequent entry, especially in the case of maritime and air traffic.

In order for business entities to realise all the advantages of such a system, they must develop their own applications and IT systems compatible with the ICS and connect with the Information System of the Croatian Customs Administration in a manner which enables the sending of electronic messages of prescribed form and content. The data exchange model is similar to the one already developed within the NCTS system, and the exchange itself is also conducted with the use of the G2B service of the Customs Administration and the electronic signature developed for the purposes of the NCTS.

Together with these instructions, the national technical documentation for external users has also been prepared, as an aid to business entities in the building of their own ICS applications, along with other business and technical documentation prepared by the European Commission.

A special working group consisting of the business and technical sections of the project team is responsible for the introduction of phase 1 of the ICS in Croatia, with the task of preparing and maintaining documentation for business entities, among other things. For all questions, users are referred to a special e-mail address, helpdesk@carina.hr, where they can get answers to professional and technical inquiries.

2. PURPOSE OF THE DOCUMENT

The purpose of this document is to define the correct structure and content of electronic messages exchanged between business entities (external users) and the Information System of the Customs Administration of the Republic of Croatia. The document is intended for external users which will develop their own application for the exchange of ICS messages. All documentation indicated in chapter 3 is to be considered an addition to this document. In order to facilitate the managing of the comprehensive documentation, this document only refers to those messages which are a subject of the exchange between business entities (external users) and the customs.

All electronic messages referred to in Chapter 5 of this document must have the prescribed form and content. Applications of external users must be able to generate, send or receive messages, depending on their direction. Messages of such structure and content must be compatible with the NICA, used by the Croatian Customs Administration to support the ICS system.

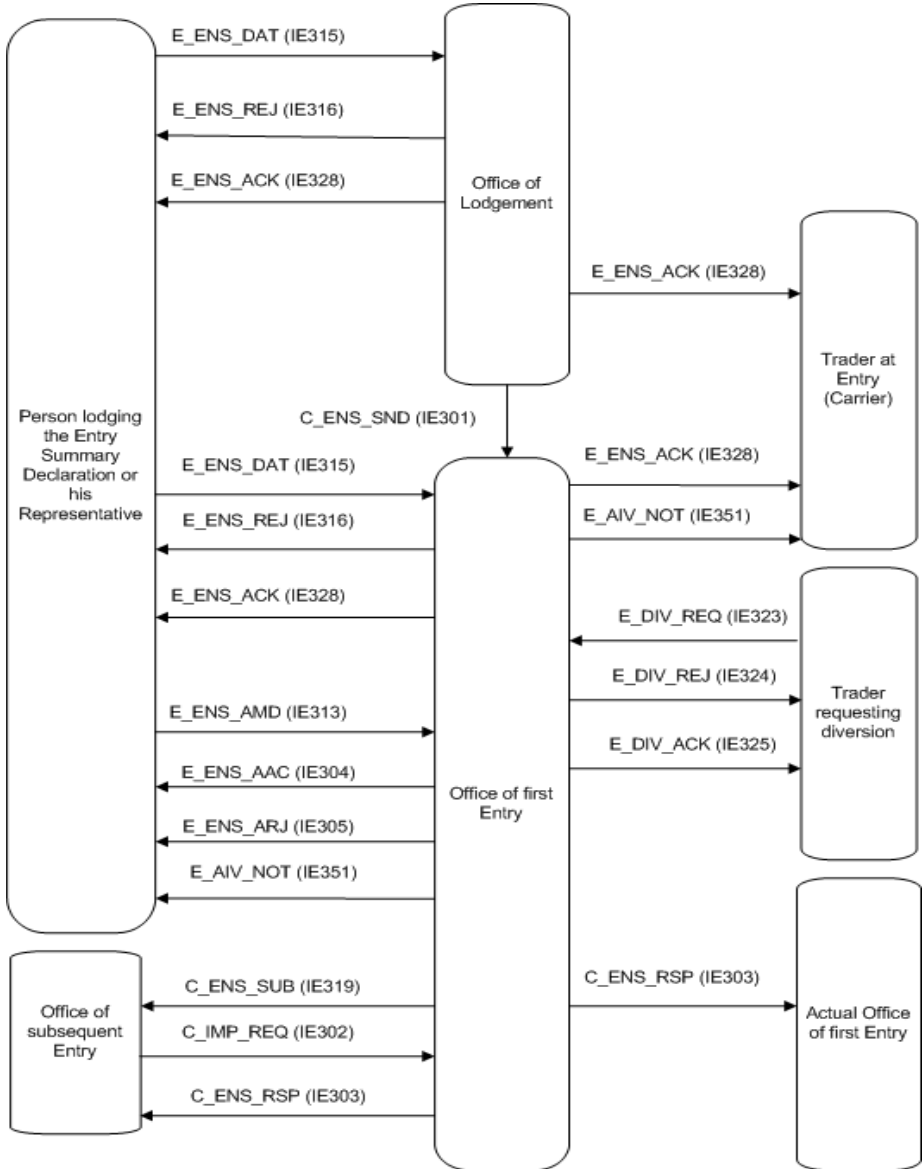

The message system in the entry procedure is designed in such a way that no additional oral or written communication is necessary between the participants of the procedure. This implies a complete electronic message exchange between customs and the sender or the recipient. The essence of communication between the external user and customs is that the external user sends messages to the customs IT system, the NICA, which conducts the further exchange of messages and data and disseminates them to all other systems necessary for the proper implementation of the entry procedure. All messages indicated in subsequent chapters are important for the communication with the external user within the same procedure.

- Ordinance on Specificities of Customs Procedure when Lodging Entry/Exit Summary Declaration for the Purposes of Safety (Official Gazette, No. 62/11)

4. FUNCTIONS OF IE MESSAGES IN THE ICS PROCEDURE

This chapter describes messages exchanged between the IT systems of business entities (external users) and the Information System of the Croatian Customs Administration, within the entry procedure. This description includes basic information and provides the external user with an overview and basic functions of individual messages.

Picture 1. Scheme of IE messages exchanged between participants in the procedure

4.1. PROCESSING OF ENTRY SUMMARY DECLARATION FOR THE PURPOSES OF SAFETY AT THE OFFICE OF FIRST ENTRY

IE315 – ENTRY SUMMARY DECLARATION FOR THE PURPOSES OF SAFETY (E_ENS_DAT)

Message IE315 is the basic message which the external user sends to the customs system and it represents the Entry Summary Declaration for the Purposes of Safety - ENS, lodged in electronic form. It contains the LRN (Local Reference Number), defined by the entity itself on the basis of its own records. The obligatory data of the message are defined by the Ordinance on Specificities of Customs Procedure when Lodging Entry/Exit Summary Declaration for the Purposes of Safety (Official Gazette, No. 62/11) and national requirements and regulations.

IE316 – ENS REJECTED (E_ENS_REJ)

This message rejects the Entry Summary Declaration for the Purposes of Safety lodged by the applicant before acceptance, i.e. before the assignment of MRN. The message is used in case of incorrect declaration data.

IE328 – ENS ACCEPTED (E_ENS_ACK)

This message assigns the MRN (Movement Reference Number) to the ENS, informing the applicant that the declaration has been accepted. The number is assigned by the national customs ICS system, at customs office level, within the period of one year.

IE313 – ENS AMENDMENT REQUESTED (E_ENS_AMD)

The IE313 message is the message which the external user sends to the customs system as a request for the amendment of the already accepted declaration which has been assigned an MRN. The request for the amendment of data, i.e. message IE313 can be submitted only by the person who lodged the ENS, and the same is submitted to the entry office of first entry. The customs system can accept the request or reject it because of the faulty condition of the message (incorrect message IE313, inadequate status of consignment). Requests for the amendment of the declaration can only be sent while the status of the consignment is adequate, which is visible from the table of message statuses at the end of this chapter. In all other statuses, requests for the amendment of the declaration

will be rejected with the message IE305. If the request for amendment is accepted, the business entity receives the message IE304. Message IE313 contains all ENS data with the amendments included.

IE304 – ENS AMENDMENT ACCEPTED (E_AMD_AAC)

With this message the customs replies to the applicant that the request for the amendment of declaration has been accepted. Message IE304 is a positive response to message IE313 and it is sent if the requested amendments comply with all regulations and requirements, as well as logical and formal checks, and if the status of the declaration prior to the application for amendment was adequate.

IE305 – ENS AMENDMENT REJECTED (E_AMD_ARJ)

With message IE305 the customs replies to the applicant that the request for the amendment of declaration has not been accepted. This message is a negative response to message IE313 and it is sent if the requested amendments are incorrect and/or if the status of the declaration prior to the application for amendment was not adequate for the acceptance of the application for amendment.

IE351 – NOTIFICATION OF CONTROL (E_AIV_NOT)

This message informs the applicant of the intention of carrying out control, i.e. examination of goods, only if the decision has been made that the goods must not be loaded.. In case the applicant has AEO status type AEOS or AEOF, it is informed of all specific controls. The notification of control is sent to the carrier under the condition that it is indicated in the ENS, has a valid EORI number and is able to exchange data with the customs system of the Republic of Croatia.

4.2. PROCESSING OF ENTRY SUMMARY DECLARATION FOR THE PURPOSES OF SAFETY AT THE SUBSEQUENT ENTRY OFFICE

The ENS is forwarded to the subsequent entry office, under the condition that part of the goods referred to in the ENS is marked as hazardous or the entire ENS has been marked as hazardous. In addition, in case the ENS contains data about at least one subsequent entry office, it shall be forwarded to that subsequent entry office.

4.3. DIVERSION PROCEDURE AT THE OFFICE OF FIRST ENTRY

The diversion procedure at the office of first entry is carried out when the actual office of first entry is different from the office of first entry declared in the ENS. In that case, the office of first entry with which the ENS has been lodged must forward the ENS to the actual entry office.

IE323 – DIVERSION REQUESTED (E_DIV_REQ)

The request for diversion within the message IE323 is sent by a business entity to the entry office declared in the ENS in case the active means of transport is diverted. In addition to other information, this message must contain the EORI number of the business entity requiring diversion, information on the actual office of first entry and the office of first entry declared in the ENS, and a list of the MRNs which have been loaded onto the diverted means of transport. In air or maritime traffic, it is necessary to indicate the unique identification number of the diverted means of transport which enables the identification of the ENS to which it refers.

IE324 – REQUEST FOR DIVERSION REJECTED (E_DIV_REJ)

Message IE324 rejects the request for diversion, i.e. the applicant is informed of the rejection of the request and of the grounds for rejection. The request can be rejected if the structure of the MRN is incorrect, if the ENS for which diversion is requested is not available, or the status of the declaration is such that it is not possible to request diversion.

IE325 – REQUEST FOR DIVERSION ACCEPTED (E_DIV_ACK)

Message IE325 informs the applicant about the acceptance of the request for diversion.

4.4. ARRIVAL OF THE GOODS AT THE ACTUAL OFFICE OF FIRST ENTRY

This procedure is carried out in all cases when goods are presented to the customs office which becomes the actual office of first entry. Upon arrival of the goods, the business entity is obliged to inform the office of first entry about the arrival of the goods.

IE347 – ARRIVAL NOTICE (E_ARN_ENT)

By message IE347, the business entity notifies the office of first entry of the arrival of the goods. This message must contain the unique identification number of the means of transport or a list of MRNs to which the notification refers. The notice of arrival must also contain data about the actual entry office. Upon submission, the correctness of message is checked and it is subsequently either accepted or rejected.

IE348 – ARRIVAL NOTICE ACCEPTED (E_ARN_VAL)

If the notice of arrival is accepted, the business entity is informed of this by message IE348 at the entry point.

IE349 – ITEM/ENS FROM ARRIVAL NOTICE REJECTED (E_ARI_REJ)

If, after the submission of message IE347, it is not possible to establish to which ENS the notice of arrival refers (nonexistent ENS), the business entity is informed about this by message IE 349 at the entry point.

4.5. ARRIVAL OF GOODS AT THE ACTUAL OFFICE OF SUBSEQUENT ENTRY

This process takes place only if one or some of the items of the ENS are declared for unloading at the actual subsequent entry customs office.

IE344 – NOTICE OF ARRIVAL AT THE SUBSEQUENT ENTRY CUSTOMS OFFICE (E_SAN_ENT)

By message IE344 the business entity notifies the actual subsequent entry office of the arrival of goods. In addition to other information, this message contains data on the actual subsequent entry office and on the ENS of goods carried on the means of transport which has arrived.

IE345 – NOTICE OF ARRIVAL AT THE SUBSEQUENT ENTRY CUSTOMS OFFICE ACCEPTED (E_SAN_VAL)

If the notice of arrival at the subsequent entry customs office is accepted, the business entity is informed of this by message IE345.

IE346 – ITEM/ENS FROM THE NOTICE OF ARRIVAL AT THE SUBSEQUENT ENTRY CUSTOMS OFFICE REJECTED (E_SAI_REJ)

If the notice of arrival at the subsequent entry customs office is rejected, the business entity is informed of this by message IE346.

4.6. PROCEDURE OF ALLOWING ENTRY AT THE ACTUAL ENTRY OFFICE

The office of first entry can carry out a control of the consignment (e.g. documentary or physical control, control of the customs seals) and either permit the entry of goods or refuse the entry of a specific consignment or part of consignment.

IE322 – ENTRY REFUSED (E_ENT_REJ)

The business entity is notified of the refusal of entry of a specific consignment or part of consignment by message IE322.

IE330 – ENTRY PERMITTED (E_ENT_REL)

In case entry is permitted, the business entity is informed of this by message IE330. Subsequently, the goods can be assigned to a requested customs treatment or use.

4.7. MESSAGES ABOUT ERRORS

IE906 – FUNCTIONAL ERROR (FUNCTIONAL NACK)

The message which informs the business entity of the fact that its previously sent message is not logically correct and fails to comply with the criteria based on structural regulations and requirements, as well as on technical regulations.

The message about a functional error contains the error indicator and an explanation of the error according to codelist 49 of Appendix C, DDNXA.

IE917 – XML STRUCTURE ERROR (XML NACK)

Message which informs the business entity of the fact that the sent message is formally incorrect (fails to comply with the XML Scheme).

4.8. MESSAGE STATUS TABLE

1. First column: IE MESSAGE

The first column of the following table indicates messages which are a subject of the exchange between the customs and the business entity. The messages are indicated in chronological order, in which they are sent.

2. Second column: TITLE OF IE MESSAGES

The second column indicates the message title.

3. Third column: SENDER/RECIPIENT

The third column indicates the message direction and the subject which sends or receives the message. The subject can be:

- the submitter of the Entry Summary Declaration for the Purposes of Safety (ENS),
- a representative,
- a business entity at the entry point (carrier),
- a business entity requesting diversion,
- a first entry customs office,
- a subsequent entry customs office.

4. Fourth column: INITIAL STATUS

This column indicates the declaration status before a message is sent. The statuses determine the state of the declaration in the entry procedure. The European statuses are defined in the DDNIA document and are complemented by national statuses.

5. Sixth column: STATUS UPON RECEIVING THE MESSAGE

This column indicates the status of the goods upon receiving the message. The statuses are defined in the DDNIA document and determine the state of the declaration in the entry procedure.

6. Seventh column: MESSAGES FOLLOWING A SENT OR RECEIVED MESSAGE

This column contains the list of all possible combinations of messages which may follow a sent or received message from the first column.

In the building of the business entity's own applications, it is especially important that the declaration, i.e. the consignment, the record of which starts with the message IE315, changes from one status to another. The statuses indicated in the fourth and fifth column are important for the purpose of using identical titles in the development of the business entity's own application.

We suggest that during development of the business entity's own application, status titles and other used terminology are maximally harmonised with that of the customs.

ENS STATUS

IE MESSAGE	NAME	SENDER/RECEIVER	INITIAL STATUS OF ENS ITEM	ENS ITEM STATUS UPON RECEIPT OF MESSAGE	MESSAGES THAT CAN FOLLOW
IE315	Entry Summary Declaration for the Purposes of Safety	Submitter of Entry Summary Declaration for the Purposes of Safety / customs office of first entry	None	Accepted, waiting for response from risk analysis;	IE328, IE316

IE917	Error in the XML structure	All Customs offices/all business entities	All statuses	All statuses	

5. STRUCTURE OF IE MESSAGES

This chapter provides a detailed description of the structure of messages that will be exchanged between the business entities and the Customs Administration within the ICS system. These messages are obligatory, which means that the applications of the business entities must be able to send or receive all the messages below.

The messages are indicated in the order of sending. The structure and format of the messages is defined in the document **Appendix Q2 DDNIA, more precisely in:**

- **CUST-DEV2-SC16 DDNIA_AP_Q2, version 11.00**

On the national level, the structure of the message IE906 indicated in the above mentioned Appendix, has been changed, and the message IE917 has been added.

For the communication between business entities and the CA the messages IE906 and IE917 indicated in this document are relevant.

The structure of IE messages (in the chapters below) is defined in the following way: Each message has its identifier (e.g. IE315), name (Croatian: *ulazna sigurnosna skraćena deklaracija* and English: Entry summary declaration) and summary name (E_ENS_DAT)

Each message consists of several data groups (e.g. MESSAGE, HEADER, CONSIGNOR TRADER...)

For each data group the following is indicated:

- name in English and Croatian (e.g. CONSIGNOR TRADER)
- number of occurrences in the message (e.g 1x or 999x)
- the obligation to enter the data group in the message (R or O or D), whereat:

R is Required
D is Dependent
O is Optional

- the list of boxes appearing in the data group

For each box in any data group, the following is indicated:

- name of the box in Croatian and English (e.g. Name, Naziv)

- number of occurrences in the message (e.g. 1x or 99x)
- the obligation to enter the data group in the message (R or O or D), whereat:
 - R is Required
 - D is Dependent
 - O is Optional
- the format of the box (explained in detail in the document 'Design Document for Common Operations and Methods - Main Document' **CUST-DEV2-SC16-DDCOM ver 11.00**)
 - E.g....
 - an..35 - which means an alphanumeric box (with alphabetic and numerical characters) that can contain up to 35 codes,
 - a2 - which mean an alpha box (only with alphabetic characters) that contains exactly two characters
 - n..11,3 – which mean a numerical box that can contain up to 11 characters, of which a maximum of 3 decimal places
- code from the code book to which the data from this box (code) must belong to (e.g. 8- country code book; which means that the data must be a country code)
- the list of the code book is indicated in 'DDNIA Appendix C: Codelists' (**CUST-DEV2-SC16 DDNIA_APP_C**).
- the code of the business regulation, rules and regulations or condition which the data from this box must meet (e.g. R040, C525, TR0099, NP001 and NU012)

Note:

The boxes are filled out in accordance with their obligation ('R', 'D', 'O') in accordance with the Rules & Conditions.

In case a certain box according to Appendix Q2 has the value 'O' or 'D', and on the national level it is differently defined as 'R', it is always necessary to take into consideration national rules and conditions (NR and NC).

Therefore, if regulations and conditions laid down in Appendix Q2 allow for certain data not to be entered (if they have code O or D), the entering of this data is obligatory if it has been so decided on the national level.

Additional LNG data:

Along with some data, additional LNG data (language) appears, which describes the language code in which data has been indicated. For the Croatian language and characters the code 'HR' is entered.

In the schematic diagram this data is indicated separately, as a special element.

Example:

```
<IdentityOfMeansOfTransportCrossingBorder  
>VŽ1234AA</IdentityOfMeansOfTransportCrossingBorder >  
<IdentityOfMeansOfTransportCrossingBorderLNG  
>HR</IdentityOfMeansOfTransportCrossingBorderLNG >
```

In data groups that describe data for various business entities (e.g. Entry Summary Declaration applicant, Consignor, Consignee etc.) the data NadLng (Name and address language) appears, which refers to the entire data group and describes the language code in which the name and address of the business entity is indicated.

For the Croatian language and characters, 'HR' is entered.

In the schematic diagram this data is indicated as an attribute that refers to the entire data group.

Example:

```
<ConsignorTrader nadLng="HR">  
<ct:Name>ABC d.o.o</ct:Name>  
<ct:StreetAndNumber>Vlaška 61</ct:StreetAndNumber>  
<ct:PostalCode>10000</ct:PostalCode>  
<ct:City>ZAGREB</ct:City>  
<ct:CountryCode>HR</ct:CountryCode>  
<ct:Tin>HR987654321010000</ct:Tin>
```

Each message is described with one data group, "MESSAGE", which consists the header of a message and a series of data groups specific for each message.

Here we will indicate the structure of the header for all messages besides messages of error (IE906 and IE917 that are separately indicated due to minor differences) and describe the method of filling out the header of a message, since the method of filling out unique for all messages.

MESSAGE

Message sender	R	an..35		
Message recipient	R	an..35		
Date of preparation	R	n6		
Time of preparation	R	n4		
Priority	O	a1		
Test indicator	O	n1	27	TR9085
Message identification	R	an..14		
Message type	R	an..6	60	
Correlation identifier	D	an..14		TR9181

The data of the header used in the message exchange with the ICS application:

- *Message sender and Message recipient*
Identifier of who is sending (sender) and who is receiving (recipient) the message.
In case that:
 1. *the business entity sends the message to the customs*, then:
 - Message sender is the identifier of the business entity sending the message (EORI identification number for foreign traders or OIB for domestic traders)
 - Message recipient is the identifier of the customs receiving the message (NICA.HR)
 2. *the business entity receives the message from the customs*, then:
 - Message sender is the identifier of the customs sending the message (NICA.HR)
 - Message recipient is the identifier of the external user receiving the message (EORI identification number for foreign traders or OIB for domestic traders).
- *Date of preparation and Time of preparation*
These are data on the date and time of the creation of the message.
- *Test indicator*
If a message is sent for testing, the indicator is 1, and if it is a production message the indicator is 0.
- *Message identification*
The data must be unique for every message.
Every message concerning the same shipment, that is the same MRN must have a different, uniquely determined ICR, even in the case when the identical message has been sent several times.

- Message type
The type of message that is sent from code book 60 (DDNIA Appendix C), e.g. CC315A.

All messages that are sent within the external domain have the prefix CC, and in the end the code A. A message has the code A if it is used for the ICS phase 2, whereas in later phases if the structure of the message is changed, it will have the code B, etc.

We additionally indicate the structure of the header for messages of error (IE906 and IE917) in addition to the description of the way of filling out the header of the message.

MESSAGE

Message sender	R	an..35		
Message recipient	R	an..35		
Date of preparation	R	n6		
Time of preparation	R	n4		
Priority	O	a1		
Test indicator	O	n1	27	TR9085
Message identification	R	an..14		
Message type	R	an..6	60	
Correlation identifier	D	an..14		TR9181

Data of the header of the messages of error which are used at in the change of messages with the NICA application are the same as with all other messages:

All above mentioned boxes are filled out in the same way as in all other messages.

Additionally, only for messages of error, the following boxes are filled out:

- *Original message identifier*
This corresponds to the data *Message identification* of a message with an error for which a message of error was created.

LIST OF IE MESSAGES

MESSAGE CODE	MESSAGE REFERENCE	MESSAGE TITLE - EN	MESSAGE TITLE - HR

6. RULES AND CONDITIONS OF ICS

6.1. NATIONAL BUSINESS RULES AND CONDITIONS

NATIONAL RULES AND CONDITIONS FOR THE ENTRY SUMMARY DECLARATION			
1.	NP001 SUSPENDED!	<p><u>National rule on declaration items:</u> Refers to the following data: <i>IE315.Header.Total number of items</i>. The total number of items in the declaration header must correspond to the sum of all items.</p>	Covered by KEL0.25-311 and introduction of TR0811 for 'Total number of items'
2.	NP005	<p><u>National rule on the date of the creation of the declaration:</u> Refers to the following data: <i>IE315.Header.Declaration date and time</i>. The Declaration Date must be lower than or equal to the date of the presentation of the declaration (<i>IE315.Header.Declaration date and time</i> ≤ (<i>IE315.Message.Date of preparation, IE315.Message.Time of preparation</i>)).</p>	
3.	NP014 SUSPENDED!	<p><u>National rule on gross mass:</u> Refers to the following data: <i>IE315.Goods item.Gross mass</i>. Gross mass data must be entered for each goods item.</p> <p><i>This NR suspends the C592, which states: IF the attribute 'Specific circumstance indicator' = 'E' and/or if 'IMPORT OPERATION.Total gross mass is used THEN this attribute is = 'O' ELSE this attribute is = 'R'.</i></p>	
4.	NP015 SUSPENDED!	<p><u>National rule on total gross mass:</u> Refers to the following data: <i>IE315.Header.Total gross mass</i>. The sum of gross mass data of each goods item must be equal to total gross mass on header level. The Declaration Date must be lower than or equal to the date of the presentation of the declaration (<i>Data IE315.Header.Total gross mass must be equal to sum of IE315.Goods item.Gross mass</i>).</p>	
5.	NP023 SUSPENDED!	<p><u>National rule on trader at entry:</u> Refers to the following data: <i>IE315.(Entry Carrier) Trader.TIN</i>. TIN in the 'Entry Carrier' is obligatory data.</p> <p><i>This NR suspends the C502, which states: IF Transport mode at border = '1', '4' or '8' (maritime transport, railway transport or internal waterways) THEN this attribute is = 'R' ELSE this attribute is = 'O'.</i></p>	C502 implemented instead
6.	NP025	<p><u>National rule on the regularity of the declared customs offices:</u> Each declared customs office is verified in the CS/COL system if it is valid on the current date of receiving the message IE315 and if it holds the role for which it has been declared:</p> <ul style="list-style-type: none"> <i>IE315.(Lodgement) Customs Office.Reference number</i> must have the role 'ENL' (this is also envisaged with the 	

	<ul style="list-style-type: none"> rule R836) and first two characters of its code must be HR <i>IE315.(First Entry) Customs Office.Reference number</i> must have the role 'ENT' and first two characters of its code must be HR <i>IE315.(Subsequent Entry) Customs Office.Reference number</i> must have the role 'ENT' 	
--	---	--

NATIONAL RULES AND CONDITIONS FOR ARRIVAL NOTIFICATION		
7.	NP026	<p><u>National rule on transport mode for which an electronic arrival notification is sent:</u> Refers to the following data: <i>IE344.Header.Transport mode at border</i> and <i>IE347.Header.Transport mode at border</i>. In those fields only code for sea, rail, air or inland waterways transport can be used ('1', '2', '4' i '8').</p>
8.	NP027	<p><u>National rule on Arrival Notification items:</u> Refers to the following data: <i>IE344.Header.Total number of arrival items</i> i <i>IE347.Header.Total number of arrival items</i>. The total number of items in the arrival notification header must correspond to the sum of all items (number of occurrences of <i>IE344.Arrival item</i> or <i>IE347.Arrival item</i> data groups).</p>
9.	NP028	<p><u>National rule on Country code of Office of first Entry declared:</u> Refers to the following data: <i>IE344.Arrival item.Customs data reference.Country code of Office of first Entry declared</i> i <i>IE347.Arrival item.Customs data reference.Country code of Office of first Entry declared</i>. This data is required if ENS (MRN) is not declared in Croatia (i.e. if third and fourth character from <i>IE344.Arrival item.Customs data reference.Document/reference number</i> or <i>IE347.Arrival item.Customs data reference.Document/reference number</i> are different from 'HR').</p>
10.	NP029	<p><u>National rule on the regularity of the declared customs offices in Arrival Notification:</u> Refers to the following data: <i>IE344.(Actual Office of Subsequent Entry) Customs Office.Reference number</i> and <i>IE347.(Actual Office of First Entry) Customs Office.Reference number</i>. Each declared customs office is verified in the CS/COL system if it is valid on the current date of receiving the message IE344 or IE347 and if it holds the role of Entry customs office 'ENT'.</p>
11.	NP030	<p><u>National rule on unloading indicator in Arrival notification:</u> Refers to the following data: <i>IE347.Arrival item.Customs data reference.Unloading indicator</i> and <i>IE347.Arrival item.Customs data reference.Customs data reference details.Unloading indicator</i>. <i>IE347.Arrival item.Customs data reference.Unloading indicator</i> data is entered when there are no MRN items declared (no data groups <i>IE347.Arrival item.Customs data reference.Customs data reference details</i> declared). This means that each one of the declared goods items from specified MRN are to be unloaded at customs office of first entry in case of <i>IE347.Arrival item.Customs data reference.Unloading indicator</i> = '1', or not to be unloaded in case of <i>IE347.Arrival item.Customs data reference.Unloading</i></p>

		<p><i>indicator</i> = '0'.</p> <p>If there is only one data group <i>IE347.Arrival item.Customs data reference.Customs data reference details</i>, then data <i>IE347.Arrival item.Customs data reference.Unloading indicator</i> is not to be used and data <i>IE347.Arrival item.Customs data reference.Customs data reference details.Unloading indicator</i> is mandatory.</p> <p>In this case it is considered that arrival of exactly those items specified in data <i>IE347.Arrival item.Customs data reference.Customs data reference details.MRN item number</i> is declared and that according to <i>IE347.Arrival item.Customs data reference.Customs data reference details.Unloading indicator</i> they are unloaded ('1') or not ('0') at first entry.</p>	
12.	NU012	<p><u>National condition for the name of the means of transport:</u> Refers to the following data: <i>IE344.Header.Name of the means of transport</i> and <i>IE347.Header.Name of the means of transport</i>.</p> <p>If it is maritime or internal waterways transport (<i>IE344.Header.Transport mode at border</i> or <i>IE347.Header.Transport mode at border</i> = '1' or '8'), then this data is mandatory. Else is optional.</p>	

NATIONAL RULES AND CONDITIONS FOR THE DIVERSION REQUEST			
13.	NP031	<p><u>National rule on the regularity of the customs office(s) from the Diversion Request:</u> Refers to the following data: <i>IE323.(Actual Office Of Entry) Customs Office. Reference number</i> and <i>IE323.(First Entry) Customs Office. Reference number</i></p> <p>The indicated customs office(s) must exist in the currently valid code book of customs houses. In the CS/COL system it is verified that each of the indicated customs office(s) exists on the current date of receiving the message IE323.</p>	
14.	NU013	<p><u>National condition for the identity of the means of transport:</u> Refers to the following data: <i>IE323.Header. Identification of the means of transport</i>.</p> <p>If it is air, sea or inland waterways transport (<i>IE323.Header.Transport mode at border</i> = '1', '4' or '8'), the data is obligatory. Otherwise, it is prohibited.</p> <p>This NC suspends C515 when it is applied to <i>IE323.Header. Identification of the means of transport</i>. C515 states: <i>IF Transport mode at border = '1', '4' or '8' (sea, air or inland waterways transport)</i> <i>THEN this attribute is = '0'</i> <i>ELSE this attribute can not be used.</i></p>

The data group can be present if the declaration response (IE303) is generated based on a declaration request (IE302). If the declaration response (IE303) is generated based on a diversion request (IE323), the data group can not be used.	

R080 IE301, IE303, IE313, IE315, IE319, IE344	ICS NCTS ECS
Only the SPECIAL MENTIONS that are marked as 'Common' in the reference data shall be included in common domain messages.	

R098 IE305, IE316, IE324	ICS
The values and the use of this attribute are documented in the Design Document for National Import/Export/Transit Applications (DDNIA, DDNXA and DDNTA).	

R099 IE344, IE347	ICS
The data item must be entered if the message is encoded in EDIFACT and if the corresponding free text field is not in the UNOC character set. Otherwise it is optional.	
R105 IE301, IE303, IE313, IE315, IE319, IE344	ICS NCTS ECS
The total number of packages is equal to the sum of all 'Number of packages' + all 'Number of pieces' + a value of '1' for each declared 'bulk'.	
R115 IE313	ICS NCTS ECS
The IE structure used for the amendment is the same as E_DEC_DAT/E_EXP_DAT/E_EXS_DAT /E_ENS_DAT with some changes: replace LRN by MRN R an18, replace 'Declaration date' by 'Date of amendment' R n8, (NCTS /ECS) replace 'Declaration date and time' by 'Date and time of amendment' R n12 (ICS), replace 'Declaration place' by 'Amendment place' R an..35 The IE transmits a complete amended declaration data, this means that all data groups and attributes are transmitted and not only those that are amended.	
R123 IE305, IE316, IE324,IE345	ICS NCTS ECS
From the originally received IE, only the attributes in error are transmitted back to the Trader, indicating whether the attribute(s) in question is (are) missing or incorrect.	
R131 IE319	ICS
If two or more Offices of subsequent Entry belong to the same National Administration, then only one IE319 (C_ENS_SUB) is sent to the National Administration in question.	
R132 IE303, IE319	ICS
The data group 'RISK ANALYSIS' contains the consolidated risk analysis results from the Office of first Entry. Risk analysis results from the Office of Lodgement (if any) are transmitted, if it is part of the consolidation.	

R133 IE319	ICS
<p>Following data shall be forwarded:</p> <ul style="list-style-type: none"> • Case 1 (not applicable for ICS Phase 1): The full C_ENS_SND data including the relevant common safety and security risk analysis results. As relevant are to be regarded all occurrences of the data group 'RISK ANALYSIS' which include a 'Risk analysis result code' for which the last digit is 'A', 'B', 'C' or 'Z' (only these occurrences of the data group 'RISK ANALYSIS' are to be forwarded). In case 1 the attribute 'IMPORT OPERATION.Information type' is set to '2'. • Case 2: As long as ICS is restricted to the use of information type '1', case 2 shall be used in any case and shall consist: <ul style="list-style-type: none"> A. Either of the full C_ENS_SND data if relevant common risk analysis results are present on the ENS header level (regardless of the availability of risk analysis results that are linked to ENS goods items). This is the case where one or more occurrences of the data group 'RISK ANALYSIS' are available for which the attribute 'Item Number (Box 32) involved' is not present and for which the last digit of the attribute 'RISK ANALYSIS.Risk analysis result code' is 'A', 'B', 'C' or 'Z'. Only the occurrences of the data group 'RISK ANALYSIS' which have a Risk analysis result code of type 'A', 'B', 'C' or 'Z' shall be sent. B. Or, in any other case, of the full C_ENS_SND data but including only the goods items (possibly all of them) for which relevant common risk analysis results are present on ENS goods item level. This is the case where one or more occurrences of the data group 'RISK ANALYSIS' are available for which the attribute 'RISK.ANALYSIS.Item Number (Box 32) involved' is present. In this case only these occurrences of the ENS goods items and those occurrences of the 'RISK ANALYSIS' data group for which the last digit of the 'Risk analysis result code' is 'A', 'B' or 'C' shall be sent. In case 2 the attribute 'IMPORT OPERATION.Information type' is set to '1'. <p>Once information type '2' becomes applicable, cases 1 and 2B shall be used only (case 2A shall become case 1).</p>	

R134 IE304, IE328, IE351	ICS
<p>The data group/attribute shall not be used if the message is sent to the 'Person lodging the ENS'. If the message is sent to the 'Trader at Entry (Carrier)' and if the same data group/attribute is present in the ENS, then it shall be present.</p>	

R136 IE304, IE328, IE351	ICS
<p>The data group shall contain only the 'Document Type (Box 44)' which refers to transport documents.</p>	

R147 IE304, IE328, IE351	ICS
<p>The data group shall be used if the ENS to which the message refers to contains one or more 'Document Type (Box 44)' which refers to transport documents. All declared transport documents shall be included in the message.</p>	

R148 IE303, IE319	ICS
<p>The data in the IE corresponds always to the current (latest) version of the data. This means that it contains the amended declaration data (if any) and/or the revised declaration data after a control (if any).</p>	

R221 IE303, IE319	ICS
<p>Even if the IE is sent for one or more goods items of an ENS (but not for all of them), the following attributes shall contain the totals for the complete ENS (for all items declared in the ENS):</p> <ul style="list-style-type: none"> • Total number of items (box 5) • Total number of packages (box 6) • Total gross mass (box 35) 	

R230 IE301, IE303, IE319	ICS NCTS ECS
<p>This attribute is used as a flag, its value can be either "0" ("no") or "1" ("yes").</p>	

R232	ICS NCTS ECS
<p>"Variable Holiday Date" is used as a flag and can contain 2 possible values: '0': the holiday date is fixed and thus the year doesn't have to be specified (e.g. Christmas = 25 December '1': the holiday date is variable and therefore the year will need to be specified together with the date (e.g. Easter Monday)</p>	

R410	ICS NCTS ECS
<p>The IE consist of top level data groups. Each top level data group has its own data group ACTION which attributes apply to the top level data group and its subsequent sub data groups. The sender of the IE will always (in case of Create, Update and Delete) send all values of the occurrence. The "Operation" attribute is used to indicate what action is applied to the occurrence in the IE. Its value can be: "C" (create) , "U" (update), "D"(delete). The "Validity date" together with the attribute "Modification Subtype" allow the following mechanism; An occurrence becomes invalid as of the specified "Validity date" when the value of "Modification Subtype" is set to "0" (implies an implicit end date). An occurrence and all values of the attributes become valid as of the specified "Validity date" when the value of "Modification Subtype" is set to "1". The values of the attributes become applicable as of the "Validity date" when the value of "Modification Subtype" is set to "2" (this is when the value of the attribute(s) change). "C" (create) : The create operation is used to create a new occurrence of an entity; "U" (update): The update operation is used to change an existing occurrence. It can render an existing occurrence invalid or it can modify existing values of attribute(s) of an occurrence; "D" (delete): The delete operation is used to physically delete an occurrence. This operation must only be used when data has been created erroneously.</p>	

R411	ICS NCTS ECS
<p>The 'Operation' attribute is used to indicate what action is applied: 'C' (create), 'D' (delete). In case of "updates", the data group 'SYSTEM UNAVAILABILITY' to be updated will be first deleted and then (re)-created.</p>	

R422	ICS NCTS ECS
<p>This attribute refers to the content of Column 2 in the UN/LOCODE. Column 2 shows the names of the locations (city names) which have been accepted for inclusion in UN/LOCODE, in accordance with the provisions of Recommendation n° 16 (see Rule 460).</p>	
R425	ICS NCTS ECS
<p>The attribute "Season Code" is NOT used as a flag. It is possible to have up to 9 different "seasons" in a year, depending on a defined time period, which is completely covering the year-period.</p>	
R430	ICS NCTS ECS
<p>The "Day in the week (end)" must be equal or greater then the "Day in the week (begin)".</p>	
R445	ICS NCTS ECS
<p>The SENSITIVE GOODS CODE consists of two parts: the first part represents the HS6 six digit commodity code of the TARIC system, the second part represents the "Sensitive Goods Code" which is a two numeric digit code, to be defined by DG TAXUD. This two digit numeric "Sensitive Goods Code" is only used when the 6 digit HS6 code is not specific enough to identify the concerned goods (example: the codes "0405xx" and "2208xx" in the TARIC system cover both sensitive and non sensitive goods, or more than one sensitive good, and must be extended to 0405xx.01 and 2208xx.01 in order to uniquely identify the sensitive goods). These codes are used in the ""List of Goods which when transported give rise to an increase in the Flat-rate Guarantee" (see proper domain).</p>	
R456	ICS NCTS ECS
<p>For "Package Code" use the alphabetic two-digit UN-code going from "AE"= "aerosol" to "WB" = "Wickerbottle".</p>	
R460	ICS NCTS ECS
<p>This UN/LOCODE refers to the 3 digit alphabetical code of the second part of Column 1 in the UN/LOCODE - Code for Ports and other Locations . Column 1 shows in a first part the ISO 3166 alpha-2 Country Code, which is followed by a space and a 3-alpha code for the city (location) name: XX XXX. This combination is invariably identifying the "City Name". This UN/LOCODE city name is used as an attribute in the "CUSTOMS OFFICE LSD" entity.</p>	
R486	ICS NCTS ECS
<p>This attribute can be used to indicate potential specific characteristics of the Customs Office, namely regarding variation of opening hours (e.g. during public holidays, etc.), operational and/or procedural restrictions (e.g. competent only for simplified procedures, competent only for certain goods, the only office authorised to accept flat-rate guarantees, etc.). This attribute will be coded by DG TAXUD after clear definition of the need of the NAs.</p>	

R489	ICS NCTS ECS
Reference Number Main Office is used to indicate the Customs Office (local) to which the Customs Office in question is subordinate. The use of this attribute is left up to the NAs.	
R490	ICS NCTS ECS
Reference Number Higher Authority is used to indicate that the Customs Office in question has a higher authority. As a consequence this attribute becomes required when the Office in question has a higher authority.	
R495	ICS NCTS ECS
Reference Number Take-over is used to indicate another Customs Office that replaces (take-over) the Customs Office in question when the latter is no longer able to perform NCTS operations.	
R500	ICS NCTS ECS
At least 1 of the 4 attributes must be present.	
R501	ICS NCTS ECS

The maximum time period covered by the seasons is one year. There must be no overlap of seasons, meaning that the starting day of one season must not be before the finishing day of any other season.

TR0700

ICS
NCTS
ECS

Values of field 'type' must be identical throughout the message (i.e.: same value in all the repetitions of the "System Unavailability" group).

TR0702

ICS
NCTS
ECS

Note that the IE71 is a replica of the IE70 and so the same conditions and rules can be applied. In case of unscheduled unavailability the 'down time to' of the IE70 is optional.
For the purpose of consolidation, IE70 with Type 'U' or 'N' that have no value for 'downtime to' are considered as being ongoing. This means that when a IE70 is received by the system with an empty 'down time to'-field, the timer will keep on running until a new IE70 is received containing a filled in 'down time to'-field.

TR0703	ICS NCTS ECS
Within a single "SYSTEM UNAVAILABILITY" data-group, the "Downtime from" must be prior to the "Downtime to".	

TR0704	ICS NCTS ECS
The conjunction of the following data items uniquely identifies a system unavailability: - COUNTRY.Country code - SYSTEM UNAVAILABILITY.Business functionality - SYSTEM UNAVAILABILITY.Downtime from - SYSTEM UNAVAILABILITY.Type	

TR1002	ICS NCTS ECS
This data group is applicable to NCTS Phase 4 only.	

TR1003	ICS NCTS ECS
This data group is applicable to ECS Phase 2 only.	

TR1005	ICS
This data group is applicable to EORI-AEO only.	

TR1006	ICS NCTS ECS
This data group/ item is applicable to ICS Phase 1 only.	

TR1007 IE917	ICS
The HEADER data group is not needed for IE917 related to IE30, IE31, IE32, IE912, IE913, IE914, IE916, IE931, IE932, IE70, IE71, IE971. It must be present in IE917 related to all other messages.	

TR1012	ICS NCTS
This data group is applicable to ECS Phase 2 and NCTS Phase 4 only.	

TR1013	ICS NCTS ECS
This Data group is applicable to ECS Phase 2 and ICS Phase only.	
TR1015	ICS
This data group is applicable to ECS Phase 2, NCTS Phase 4 and ICS Phase 1 only.	
TR9001	ICS NCTS ECS
The content and the format of the ACTION.Action identification attribute is free to be chosen by the producer of the message. The content must be unique in the context of the enclosing Original message identification.	
TR9002	ICS
IF "MESSAGE.COUNTRY.ACTION.Operation" = "C", "MESSAGE.COUNTRY.SYSTEM UNAVAILABILITY.System unavailability type" = "N" AND "MESSAGE.COUNTRY.SYSTEM UNAVAILABILITY.Business functionality" = "O", "P", "V" or "S" THEN the date in "MESSAGE.COUNTRY.SYSTEM UNAVAILABILITY.Downtime from" shall be at least 6 weeks after "MESSAGE.Date of preparation".	
TR9006	ICS NCTS ECS
The UPL RESPONSE.Original message identification is equal to the Interchange control reference of the corresponding IE30 transmitted.	
TR9007	ICS NCTS ECS
The value of this attribute can be: "OK", "REJECTED", "ERRORS" or "NOAUTH".	
TR9009	ICS NCTS ECS
The value of the UPL ERROR.Action identification is equal to the Action identification of the corresponding transmission.	
TR9010	ICS NCTS ECS
The attribute path is a hierarchical path from the root of the modifying occurrence down to the attribute in the message using indexed data group names and attribute names.	

TR9020	ICS NCTS ECS
The values of a date and time attribute must be specified by NAs using GMT time reference.	

TR9025	ICS NCTS ECS
Only System Unavailability Type "S" is acceptable for this field in the IE912 message.	

TR9080	ICS NCTS ECS
Within the "HEADER" data-group, the "Period from date" must be prior or equal to the "Period to date".

<p>The "ENTRY KEY" data group shall be used only when the rejected messages are the IE302 and the IE303, and the Entry Key is present in these messages. Otherwise, the "Document/reference number" shall be used at the "HEADER" data group. For IE302 and IE303, the first MRN will be used (if the "ENTRY KEY" is not used). The "Document/reference number" data item and the "ENTRY KEY" data group cannot be used at the same time.</p>	

TR9250	ICS NCTS ECS
IE917, IE906	
<p>The field can accept any printable character with ASCII value 32-126 or 160-255 of UNOC: Latin-1 ISO 8859-1, UNOD: Latin-2 ISO 8859-2 (Central Europe), UNOH: Latin-4 ISO 8859-4, UNOE: Latin-5 ISO 8859-5 or with ASCII value 32-126 or 160-254 of UNOF: Greek ISO 8859-7. Any other character must be transliterated to one of the aforementioned character set.</p>	

7. STRUCTURE OF REFERENCE NUMBERS

7.1. ECONOMIC OPERATOR REGISTRATION AND IDENTIFICATION NUMBER (EORI)

TIN (Trader Identification Number) is the reference which uniquely represents every business entity in its electronic transactions with customs. EORI number is used as TIN in electronic message exchange with customs, within the e-Customs service. Business entity as sender or receiver of IE messages is identified by EORI number.

The structure of EORI consists of 17 digits. The first two digits comprise the ISO alpha two-digit country code of EU member state, which in the Republic of Croatia is HR. The next up to 15 digits are the unique identifier. EORI numbers assigned by HR administration are comprised of HR identifier and either next 11 numbers representing Personal Identification Number of business entity (OIB) or, for entities from third countries, ISO alpha 2 country code followed by 9 unique numbers.

EORI structure:

Box	Content	Box type and format	Example
1	Identifier of the Member State assigning the number (ISO alpha 2 country code)	Alphabetic 2 (a2)	HR
2	Unique identifier in a Member State	Alphanumeric 15 (an..15)	12345678901

7.2. LOCAL REFERENCE NUMBER (LRN)*

7.2.1. Local reference number of the entry summary declaration

It is determined on the national level and assigned by the user in each consignment in agreement with competent authorities in order to identify every individual submitted declaration. The LRN sent by the business entity is the number that uniquely represents the consignment of that business entity until the moment in which the customs IT system grants it the declaration number (MRN), and after a carried out treatment the logic controls. After the assignment of the MRN, the LRN expires and the consignment is from then on monitored via the MRN. Once used, the LRN number cannot be repeated.

For business entities with residence outside of the Republic of Croatia the LRN needs to be of an..22 structure and unique.

7.2.2. Local reference number of the diversion request

The local reference number of the diversion request (*IE323.Header.Diversion reference number*) is the identifier of the diversion request created by the business entity that requests the diversion.

For business entities with residence outside of the Republic of Croatia the LRN needs to be of an..22 structure and unique.

7.2.3. Local reference number of the arrival notification

The local reference number of the diversion request (*IE323.Header.Diversion reference number*) is the identifier of the diversion request created by the business entity that requests the diversion.

For business entities with residence outside of the Republic of Croatia the LRN needs to be of an..22 structure and unique.

7.3. MOVEMENT REFERENCE NUMBER (MRN)

The MRN is a unique and unambiguous identifier of a consignment in the system. The structure of the MRN is in the form of an alpha-numeric code with 18 characters on the basis of the following model.

The structure needs to be as follows:

- it has to have the following length: an18,
- the first two characters (YY) indicate the last two digits of the current year (YY),
- the next 8 characters (HRXXXXXX) indicate the code of the customs office which assigns the MRN of the consignment (*IE315.(First Entry) Customs Office.Reference number*),
- the next 1 character (N) is the procedure code – code 'N' for the entry summary declaration
- the next 6 characters (YYYYYYYY) is the number unique at the level of the year, customs office and procedure. It starts from 000001 and increases by 1.
- the last character (K) is the control digit, generated according to an algorithm in accordance with ISO 6346.

An example of an MRN structure:GGHRXXXXXXNYYYYYYYK

8. TECHNICAL REQUIREMENTS FOR THE ICS ELECTRONIC MESSAGE EXCHANGE

8.1. GENERAL AND JOINT TECHNICAL REQUIREMENTS FOR ALL APPLICATIONS OF BUSINESS ENTITIES

For the purposes of data exchange (documents, messages) between the business entities and customs, a module (the so-called "G2B Service") has been developed, and is used by several customs application sub-systems. The module is based on open IT standards (HTTP, XML, SOAP, XAdES,...) and uses the Internet as a communication infrastructure.

The G2B service is the application (gateway) to the information system of the Croatian Customs Administration and as such offers core service for document exchange. Each sub-system (NCTS, ECS, ICS,...) additionally defines the details of the communication between the application of the business entity and the customs sub-system that result from business requirements. All requests towards the G2B service, and replies to the received requests are electronically signed in accordance with the Electronic Signature Act (OG 10/2 and 80/08) and European Union directives.

The business entity needs to have an adequate application that recognises the rules of communication with the G2B service, and the specific qualities of the customs sub-system with which it communicates.

On the level of the G2B service, the following services are carried out:

- access authentication and control (to the G2B service)
- digital signature verification (includes identification and authentication of the signatory)
- request authorisation
- directing the request to the application sub-system (ICS, NCTS, ECS, ...).

*Technical details on the G2B service are described in the document '**Technical Specifications of the G2B Service v1.1**'.*

The policy of the use of the electronic signature is provided in the document "Guidelines on the use of the electronic signature in the process of document exchange

between business entities and the Croatian Customs Administration-and in the framework of e-customs" (see the "Ordinance on the rules and regulations and requirements for the connection of certification systems of electronic signatures" (OG 89/02).

In addition to the G2B service, an accompanying web application was developed for the purposes of the administration of the service users. The basic purpose of this application is that business entities can manage the authorisation levels of their own employees and authorised persons.

The following figure presents the relation between the applications of business entities and the G2B service and customs sub-systems:

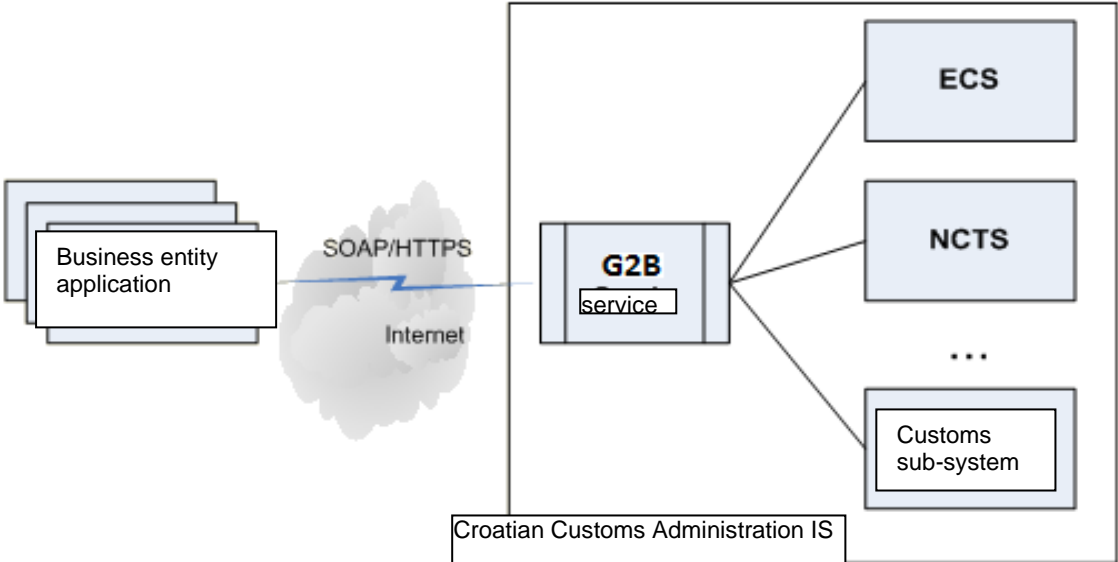

Figure 2. Schematic diagram of the connection of the business entities' information systems and the Croatian Customs Administration information system
